

Frequently Asked Questions: The "breve" Simulation Environment

Software Versions: breve 2.4 beta
Ubuntu Linux 5.10

Document Version: February 27, 2006

1. How do I run breve in the background?

```
$ /path/to/breve-folder/bin/breve_cli /path/to/some.tz &  
$ exit
```

Note: Be sure to "exit" instead of just closing the Terminal window.
Just simply closing the window without exiting first will kill the breve_cli process.

2. How do I run the breveIDE under Ubuntu Linux?

See <http://brevecluster.nmu.edu/downloads/Running-breveIDE-under-Ubuntu-Linux.pdf>
